

STRAPLESS BRA.

This bra has been designed for the very breast support even without shoulder straps: for a nice evening dress for example, which enhances the nude look.

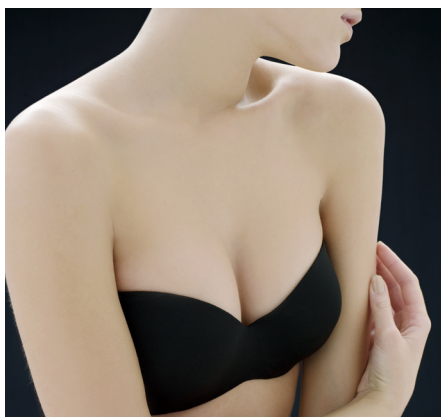

The padded strapless bra has been technically designed to allow support even without shoulder straps. Backs have been developed to adhere perfectly to the bust, often with silicone borders and flexible side ribs boning. The cleavage is horizontal and pushes the breasts upwards. Padded cups may also be graded with oil – and air-filled sacks or with the same fabric of the cup.

ADVICE: the strapless bra is used to enhance your natural shape under strapless dresses.
